RIS / Press fitting transition from the old to the new system

On one side the fitting is build (as supplied before) with a white fixation and an attached sleeve for the old version. On the other side you see the sleeve with the pressured combination ring and flanging PressCheck for the jaw fixation for the new system.

New PressCheck contour and sleeve with flanging and combination ring

Production run contour and sleeve until 31.03.08 with fixing ring and pressured sleeve

Of course the side with the production run contour (until 31.03.08) can be pressed with the reconverted press loop. Therefore the press loop has to clasp the sleeve in centre.

In case of reclamation the fittings are available in calendar week 15. We commissioned 250 pieces of every dimension.

<u>Material No.</u>	<u>Material description</u>
1135004418	Transition fitting PressCheck 40 mm
1135004419	Transition fitting PressCheck 50 mm

Please equip your stock with small quantities to be able to help out if necessary.
